

How to create a .exe installer

1. Download the software “Inno Setup Compiler”
2. Click on File->New then Next
3. Fill in the information asked, like that:

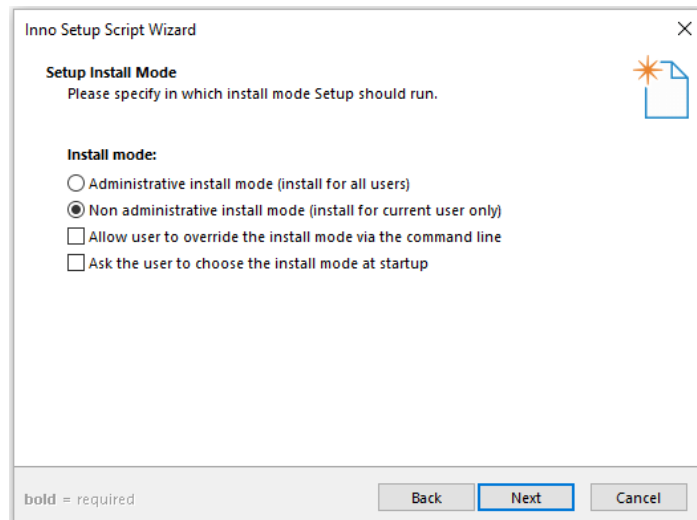

The screenshot shows the 'Inno Setup Script Wizard' window, specifically the 'Application Information' step. The window title is 'Inno Setup Script Wizard'. Below the title bar, there's a close button (X) and a help icon (a document with a star). The main heading is 'Application Information' with a sub instruction: 'Please specify some basic information about your application.' There are four text input fields: 'Application name:' containing 'ACASYA', 'Application version:' containing '1.0', 'Application publisher:' containing 'Marvyn Pannetier', and 'Application website:' which is empty. At the bottom, there's a status bar that says 'bold = required' and three buttons: 'Back', 'Next' (highlighted with a blue border), and 'Cancel'.

4. Then click on Next until this window:

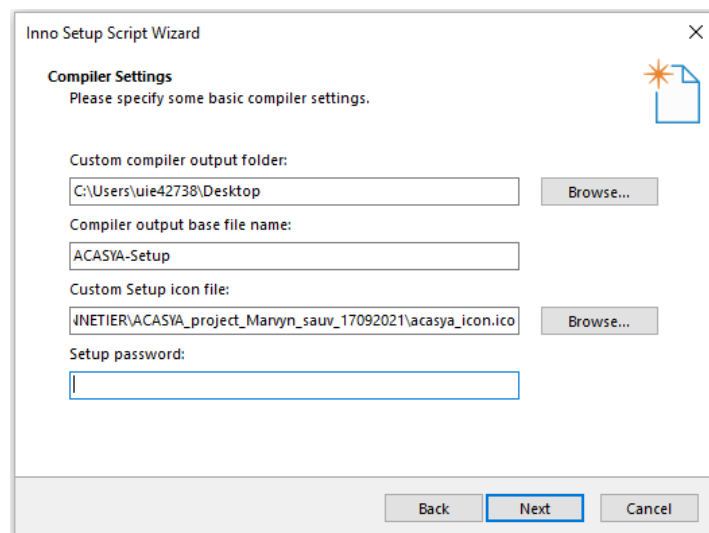

The screenshot shows the 'Inno Setup Script Wizard' window, specifically the 'Application Files' step. The window title is 'Inno Setup Script Wizard'. Below the title bar, there's a close button (X) and a help icon (a document with a star). The main heading is 'Application Files' with a sub instruction: 'Please specify the files that are part of your application.' There's a section for 'Application main executable file:' with a text input field containing 'C:\Program Files (x86)\Inno Setup 6\Examples\MyProg.exe' and a 'Browse...' button. Below this are two checkboxes: 'Allow user to start the application after Setup has finished' (checked) and 'The application doesn't have a main executable file' (unchecked). There's a section for 'Other application files:' with a large empty text area. To the right of this area are four buttons: 'Add file(s)...', 'Add folder...', 'Edit...', and 'Remove'. At the bottom, there's a status bar that says 'bold = required' and three buttons: 'Back', 'Next' (highlighted with a blue border), and 'Cancel'.

5. Click on *Browse* and select your ACASYA.exe generate by LabWindowsCVI. Then click on *Add Folder* and select the folder called “Necessary files for installation” say YES to the popup about the subfolders and click on Next
6. Click on Next until the window below and choose the second option like on the screenshot:

7. Next until this window that you must fill in like that for example:

8. Next two times then click on Finish, two popups will appear, say Yes to the both, save it and your installer will be created at the place you chose before!
